ABSTRACT

A three-year longitudinal followup mail survey of the 1980-81 graduates of 12 cooperating districts of the Wisconsin Vocational, Technical, and Adult Education (VTAE) was conducted beginning in the summer of 1984. The purpose of the survey was to determine and analyze changes in selected circumstances that may have occurred over the three-year period. The study found that although changes occurred in employment status for many persons, with few exceptions, there were only slight differences in total aggregate data between the six-month and the three-year survey. There was a noticeable increase in average monthly salaries over the three-year period. Some of the major conclusions were the following: (1) the percent of graduates in the labor force increased from 89 percent at the six-month survey to 93 percent at the three-year survey; (2) the number of graduates employed in fields related to training declined slightly over the three-year period from 83 percent to 78 percent, while the rate of those employed in unrelated fields increased correspondingly; (3) about a third of those unemployed in 1984 were also unemployed in 1981; (4) average monthly salaries increased by 20 to 40 percent over the three-year period; (5) 40 percent of the respondents had taken additional career-related courses, and 13 percent had obtained another educational degree or diploma or certification in business or industry; (6) the former graduates had averaged almost two jobs and one promotion over the three-year period; and (7) most of the graduates thought that vocational-technical education was important to their beginning careers and would recommend it to their friends. (The report contains numerous tables of statistics gathered during the survey.) (KC)

FOREWORD

The dynamics of the world of work, advancing technological developments, and changing economic conditions create many challenges to youth in making career decisions, to staff in revising curricula, and to vocational administrators in developing goals and planning programs.

Research and follow up of students can furnish valuable data and information needed to help meet the above challenges. Communicating the results of this report can assist in these efforts.

The Wisconsin Board of Vocational, Technical and Adult Education is in full compliance with state and federal equal opportunity and affirmative action laws and regulations including Title IX of the 1972 Education Amendments and Section 504 of the 1973 Rehabilitation Act. It is the policy of the WBVTAE not to discriminate on the basis of race, color, national origin, creed, sex, age, handicap and arrest or conviction record in employment or on the basis of race, color, national origin, sex or handicap in education programs, admissions and activities. Coordination of Title IX and Section 504 have been assigned to the Affirmative Action Officer. Inquiries regarding equal opportunity may be directed to Affirmative Action Officer, 7th Floor Hill Farms, 4802 Sheboygan Avenue, P.O. Box 7874, Madison, Wisconsin 53707; phone (608) 266-1207

I
SUMMARY AND CONCLUSIONS

A three-year longitudinal follow-up mail survey of the 1980-81 graduates of twelve cooperating districts of the Wisconsin Vocational, Technical and Adult Education system was conducted beginning in the summer of 1984. The purpose of the survey was to determine and analyze changes in selected circumstances which may have occurred over the three-year period. Although changes occurred in employment status for many individuals, with few exceptions, there were only slight differences in total aggregate data between the six-month and the three-year survey. There was a noticeable increase in average monthly salaries over the three-year period.

Major conclusions include:

1. With the exception of employed-related part-time, the change in aggregate employment status varied seven percentage points or less from the six-month survey to the three-year survey.

2. The percent of graduates in the labor force increased from 89 percent at the six-month survey to 93 percent at the three-year survey.

3. The rate of employment of the respondents in the labor force remained high over the three-year period increasing from 87 percent in 1981 to 94 percent in 1984.

4. The rate of employed-related to training declined slightly over the three-year period from 83 percent to 78 percent, while the rate of employed-unrelated increased from 14 percent to 21 percent from the six-month survey to the three-year survey.

5. Seventy-eight percent of those employed-related in 1984 had also been employed-related in 1981, and 33 percent of those employed-unrelated in 1984 had been employed-related in 1981.

6. About a third (32%) of the respondents who were employed-unrelated in 1984 were also employed-unrelated in 1981.

7. About a third (31%) of those unemployed (seeking work) in 1984 were also unemployed (seeking work) in 1981.

8. About a fourth (25%) of those not in the labor force in 1984 were also not in the labor force in 1981.

9. About two-thirds (68%) of the respondents were employed in the district in which they received training and 72 percent of these had been employed in the district of training during the six-month survey.

10. Several (6%) of those respondents in the district of training had returned from out-of-district or out-of-state since the six-month survey.

11. Average monthly salaries increased by 20 to 40 percent over the three-year period.

12. Although continuing education as a reason for not being in the labor force declined from 8 percent to 3 percent over the three-year period, 40 percent of the respondents had taken additional career-related courses and 13 percent had obtained another educational degree or diploma or certification in business or industry.

13. The former graduates had averaged almost two (1.8) jobs and one (.9) promotion or advancement over the three-year period.

14. Three-fourths (76%) of the graduates felt that vocational-technical education was important or very important in beginning their careers while over half (53%) felt it was important or very important in career advancement.

15. Two-thirds (66%) would definitely recommend vocational-technical education to others entering their field.

II
INTRODUCTION

Background: The federal government and the Wisconsin Board of Vocational, Technical and Adult Education (WBVTAE) require VTAE districts to annually conduct graduate follow-up studies. In addition, through cooperative development, the VTAE system conducts longitudinal surveys biennially which result in a three-year and a five-year study of every other class.

Problem/Need: Many factors, forces, trends, events, and issues are causing changes in our society which have implications for VTAE in Wisconsin. These include demographic and cultural changes, labor force and work place trends, technological developments, societal expectations, educational, corporate, economic and other trends. Data and information on the above are needed to help youth in career decision-making and to help the VTAE system develop programs to prepare and update people for the world of work.

The success of a district can best be measured by the success of its students. To ascertain the effectiveness of programs, there should be a follow-up from the day the student enrolls in the district until after he or she gains employment or transfers to another institution. A follow-up study is conducted to determine the status of a group after some period of time. Studies are conducted for the purpose of internal or external evaluation of the instructional programs or some other aspect of the district. It is a process by which a district determines how effectively it is meeting the current and future needs of those it serves. The goal is to seek institutional improvement of the district's programs.

The information, gathered from former students, may be useful to help: (1) students in making career choices, (2) instructors in ascertaining effectiveness of teaching, (3) guidance counselors in counseling students, (4) instructional services supervisors in curriculum revisions, (5) coordinators in program planning, and (6) administrators in establishing program goals, and in evaluating results.

A longitudinal study is a follow-up which examines the characteristics (or circumstances) of the same individuals (cohort) at two or more points in time.

Longitudinal analysis involves either an examination of the relationships among characteristics (or conditions) of these individuals in different periods of time, or of changes in one or more of their characteristics over time. A longitudinal study tends to negate the weaknesses and difficulties due to loss of memory and changing values over time which are inherent in collecting data retrospectively in a single survey.

Longitudinal studies help provide answers to questions that cannot be obtained in any other way. These studies are particularly appropriate in the quantification of a variety of dimensions of labor market dynamics. These include the extent of movement into and out of the labor force, between employment and unemployment, among firms, geographic regions, and occupations. Cross-sectional studies taken at two points in time permit a measure of the net changes that have occurred in the occupational distribution, for example, but they provide no information on the magnitude of the gross flows of individuals among occupational categories that lie behind whatever change in distribution is observed.

Analysis of longitudinal data may alert the researcher to further study of cause and effect relationships between two or more variables.

Purpose/Objectives: The overall purpose of this study was to determine and analyze the changes in status of selected characteristics, conditions or circumstances which occurred for the 1980-81 VTAE graduates from the time of the six-month follow-up survey beginning in the fall of 1981 to the time of the three-year follow-up survey beginning in the summer of 1984.

Objectives included:

1. Ascertain the Fall 1981 employment and other circumstances and responses of the 1980-81 graduates.

2. Determine the 1984 employment and other circumstances and responses of the 1980-81 graduates.

3. Analyze changes and relationships between the graduates' employment and other circumstances and responses which took place from the fall of 1981 to the summer of 1984.

Limitations of Study: The following limitations should be considered when reviewing the study:

1. Only twelve of the sixteen VTAE districts participated in the three-year follow-up survey; District One, Southwest, Waukesha and Fox Valley did not report results to the WBVTAE.

2. The three-year follow-up survey was conducted beginning in the summer of 1984 while the six-month survey was conducted beginning in the fall of 1981 resulting in a less-than-three-year time period. Typically, fall is a time when changes may occur in school and employment status.

3. Some six-month data were aggregated for the 16 districts and not for the twelve responding districts. Consequently, some statewide comparisons are made between the 12-district three-year survey results and the 16-district six-month results. However, the 12-district totals represent 77% of the 1980-81 graduates. With two predominately rural and two urbanized districts omitted, there is little reason to believe there is any significant bias in the results. The cross-tabulations are based on the responses from the twelve districts included in the study.

4. The three-year data are cross-tabulated with the six-month data of the twelve responding districts in terms of the respondents' status at the three-year time period.

Methodology/Procedures: During February 1984, the WBVTAE generated a list of 1980-81 graduates to be surveyed by each district as recorded in the 1980-81 six-month follow-up study. The VTAE districts provided the date of birth for each graduate on cards or tape to the WBVTAE for the purpose of matching with the State Department of Transportation (DOT) records to obtain current addresses. These results were distributed to the districts in May and were

III
FINDINGS/RESULTS

In this document "total" refers to the twelve responding VTAE districts unless otherwise indicated. Table 1 indicates the twelve cooperating districts had 10,871 graduates in the class of 1981 ranging from 172 at Nicolet College and Technical Institute to 1,949 at Milwaukee Area Technical College. The number and rate of respondents declined from 9,846 (91%) in 1981 to 6,115 (60%) in 1984.

Table 1
NUMBER OF GRADUATES AND RESPONDENTS

VTAE District	Number of Graduates 1980-81	Respondents Six- Months N	%	Mailed	Respondents Three-Year Returned	%

Nicolet	172	168	97	132	43	33
Indianhead	928	840	90	936	639	68
TOTALS	10,871	9,846	91	10,217	6,115	60%

Table 2 indicates that 93 percent of the 6,115 respondents in the three-year survey were in the labor force and of these, 94 percent were employed. These were slightly higher rates than the 89 percent and 87 percent rates respectively for the 16 VTAE district total for the six-month survey in 1981. Among divisions, these rates ranged from a low of 82 percent in the labor force and 86 percent employed for College Parallel to a high of 97 percent in the labor force for the Industrial Division and 98 percent employed in Agribusiness. Employed-Related was 78 percent for the twelve districts and ranged from 65 percent for the Industrial Division to 87 percent for Agribusiness.

Regarding employment location, on a total basis, 68 percent of the former students were employed in the district where they received their training. This ranged from 49 percent for Technical and TV Division to 82 percent for College Parallel. The most common reason given for the job not being related to training was an unwillingness to relocate for another job.

The average monthly salary mean and median increased 25 percent and 40 percent respectively for those employed-related to their training from 1981 to 1984. The mean and median increased about 20 percent and 30 percent respectively for those employed-unrelated to their training over the three-year period. At the three-year mark, the means and medians ranged from lows of less than $1,000 in

the Home Economics Division to highs of over $1,600 in College Parallel, Technical and TV, and Service occupations. Average weekly full-time hours ranged from 41 hours in Health and Office Education to 57 in Agribusiness.

The two most frequently reported reasons for not being in the labor force in the three-year survey were continuing education and full-time homemaker.

Table 3 indicates that 76 percent of the respondents rated vocational-technical education as being important or very important in beginning their careers. These ratings varied from 55 percent in Distributive and Marketing to 89 percent in Health Occupations. About 40 to 60 percent of respondents felt the training was important or very important in their career advancement. Over 90 percent of the respondents would "maybe" or "definitely" recommend vocational-technical education to others entering their field.

Over 40 percent of the graduates had taken additional career related courses since graduation. This ranged from 32 percent in Agribusiness to 61 and 62 percent in Service occupations and College Parallel, respectively. Six-hundred seventy-eight respondents (11%) had obtained another degree or diploma since graduation and 101 respondents (2%) had received some type of certification from business and industry.

An average of 1.8 jobs had been held by the respondents with the highest average in the Graphics and Applied Arts Division at 2.2 and the lowest average in Agribusiness at 1.5 jobs. In total, the graduates averaged slightly less than one promotion or advancement since graduation.

Table 4 displays the total cross-tabulations of the change in employment status of those employed-related to their training in 1984, and indicates that 3,220 (78%) of them were also employed-related to their training during the six-month survey. An additional five percent had been employed-unrelated to their training. Six percent had been unemployed and six percent were not in the labor force when the six-month survey was conducted. The employed-related varied from 73 percent for one-year diploma programs to 81 percent for associate degree programs.

Tables 7, 8, and 9 display the total cross-tabulations of those employed in 1984 unrelated to their training. About a third (33%) of the respondents had been employed-related to their training in 1981. This ranged from 106 (26%) respondents in the Industrial Division to 39 (46%) respondents in the Home Economics Division. About another third (32%) had also been employed-unrelated to their training in 1981. This group had experienced higher rates of unemployed (18%) and not in the labor force (11%) at six months, compared to those respondents employed-related to their training.

APPENDIX A

WISCONSIN VOCATIONAL, TECHNICAL AND ADULT EDUCATION

3 and 5 Year Longitudinal Study

Please respond to the following statements:

1. How important was vocational/technical education in beginning your career?
   Very Important Important Somewhat No Importance

2. How important is/was vocational/technical education in your career advancement?
   Very Important Important Somewhat No Importance

3. I would recommend vocational/technical education to others entering my field?
   Definitely Maybe No

4. Since graduation from our school, have you taken any additional career related courses:
   _____Yes, at Vocational/Technical School
   _____Yes, at College/University
   _____Yes, at _____
   (please specify)
   _____No

5. Have you received any other degree/diploma since your graduation from our school?
   Yes, at _____
   Institution Degree
   _____No

6. How many jobs have you held since graduation:
   0 1 2 3 4 5 More than 5

7. How many jobs have you held that were related to your vocational/technical education program?
   0 1 2 3 4 5 More than 5

8. How many times have you been promoted or advanced in your career since graduation? (excluding annual salary increases)
   0 1 2 3 4 5 More than 5

9. Which one of the following best describes your present status?
   _____Employed
   _____Military service
   _____Not employed, but looking for a job
   _____Student
   _____Not available for employment; please reason _____
   _____

IF EMPLOYED, PLEASE CONTINUE WITH QUESTION 10
IF NOT EMPLOYED, PLEASE SKIP TO QUESTION 12

10. Please list the following job information.
    A. Job title _____
    B. Job duties _____
    _____
    C. Name of employer _____
    Location _____
    City State
    D. Is your job related to the training you received at our school?
    Directly related Somewhat related Not related
    E. What is your present wage, before deductions? (Do not use overtime. Strictly confidential. Used only to compute average wages in your field.)
    _____/Hour or _____/Week or _____/Month or _____/Year
    F. How many hours do you work during an average work week?
    Hours

11. If you are working in a job that is not related to your training, please indicate the reason. (Check one):
    Worked previously in related job, but changed to advance.
    Found I enjoy another type of work more.
    Unable to find related job in my geographic area.
    Could earn more in another field of employment.
    Other, please specify. _____

12. What suggestions do you have to improve our educational programs and/or activities?
    _____
    _____
